Date: July 08, 2016

Dear Sir

RGPV and Sapience Consulting-Texas Instruments University Program partner collaborated earlier in March 2015. The TI Center of Excellence (CoE) set up at various locations has been instrumental in training faculty on TI educational platforms.

Through this collaboration, RGPV's endeavour is to facilitate students and professors alike to stay a step ahead of the conventional mode of both teaching and learning. The TI University programs bring together everyone who is working towards the common goal of equipping students and Faculty with industry necessary skill-sets and making technology accessible to the academia.

After our successful **Faculty Development Program**, it gives us great pleasure to kick start other TI activities in RGPV such as **SrishTI-Entrepreneurship Program**, **Webinar** and **Online Contest,** to further extend the program by another step, from faculty mentors to student's engagement.

Brief description about upcoming TI Activities are mentioned below:

- **Entrepreneurship Program "SrishTI":** We would like to create linkages with-in state incubators and CoE to initiate start-up ventures after business case validation; this would help RGPV to enrich the start-up ecosystem in the state of Madhya Pradesh.

- **Webinars**: The core objective of the webinar is to re-emphasis the concepts and hand hold the existing Faculty Mentors and any other new Faculties from affiliated colleges and most importantly the student's participation in it directly so that they know more on the subjects at a common and bigger platform. Time table of Webinar is attached herewith. Kindly provide the name, email and phone no. of one coordinating teacher from your respective institute on the form (will be made available soon on the University Portal)

- **Online Contest**: The prime objective of this contest is to assess the knowledge of the student's, what they have learned from the Webinars. Top scorers in the contest will be accordingly rewarded.
  Specific details on how to participate in the program will be mentioned in the documents that are provided (hosted on the University website)

We want your cooperation for these activities so that this proves to be a milestone for thousands of students and thus strengthening their technical know-how in the Analog and Embedded domains through the process of experiential learning.

We are sure that the experience of taking part in these activities will be enriching.

Attaching some posters and Time Table of Webinar for your pursuance. Plz take out the printouts and display on the notice-board for the wide publicity of the students, faculty and concerns.

Eagerly looking forward to your participation

Regards

Dr. Rakesh Singhai

Coordinator

TI Excellence Center
