

**CSE- - Internet of Things and Cyber Security Including Block Chain Technology,**

**IV-Semester**

**IS401 Probability, Statistics and Linear Algebra**

**Unit 1: Basic Probability** - Probability spaces, conditional probability, independence; Discrete random variables, continuous random variable and their properties, distribution functions and densities, exponential and gamma densities. Independent random variables, the multinomial distribution, Chebyshev's Inequality, Bayes' rule.

**Unit 2: Basic Statistics**- Measures of Central tendency: Moments, skewness and Kurtosis - Probability distributions: Binomial, Poisson and Normal - evaluation of statistical parameters for these three distributions, Correlation and regression – Rank correlation.

**Unit 3: Applied Statistics**- Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves. Test of significance: Large sample test for single proportion, difference of proportions, single mean, difference of means, and difference of standard deviations.

**Unit 4: Small samples** - Test for single mean, difference of means and correlation coefficients, test for ratio of variances – Testing of Hypothesis and independence of attributes, Time Series

**Unit 5: Linear Algebra**- Cramer's rule, Singular Value decomposition, Euclidian vector spaces, Projection. Hermitian and Unitary Matrix, Gram -Schmidt orthogonalization, LU- decomposition

**CSE- - Internet of Things and Cyber Security Including Block Chain Technology,**

**IV-Semester**

**IS402 Fundamentals of IOT**

**OBJECTIVES:** To understand the basics of Internet of Things

1. To get an idea of some of the application areas where Internet of Things can be applied
2. To understand the middleware for Internet of Things and the concepts of Web of Things
3. To understand the concepts of Cloud of Things with emphasis on Mobile cloudcomputing
4. To understand the IOT protocols

**Unit 1 :Introduction to IoT:** Architectural Overview, Design principles and needed capabilities,IoT Applications, Sensing, Actuation, Basics of Networking, M2M and IoT TechnologyFundamentals- Devices and gateways, Data management, Business processes in IoT,Everything as a Service(XaaS), Role of Cloud in IoT, Security aspects in IoT.

**Unit 2 :Elements of IoT:** Hardware Components- Computing (Arduino, Raspberry Pi),Communication, Sensing, Actuation, I/O interfaces. Software Components Programming API's (using Python/ Node.js/ Arduino) for Communication ProtocolsMQTT, ZigBee, Bluetooth, CoAP, UDP, TCP,M2M and WSN Protocols – SCADA and RFIDProtocols.

**Unit 3 :IOT framework:** Basic IOT Framework, Architectural view, Physical & Logical design,Applications. Machine-to-machine (M2M), Software Defined Networking (SDN)and Network FunctionVirtualization (NFV), data storage, Message Communicationmechanism.

**Unit 4 :. IoT Application Development:** Solution framework for IoT applications- Implementationof Device integration, Data acquisition and integration, Device data storage, Unstructured data storage on cloud/local server, Authentication, authorization ofdevices.

**Unit 5 :. IoT Case Studies:** IoT case studies and mini projects based on Industrial automation,Transportation, Agriculture, Healthcare, Home Automation

**TEXT BOOKS RECOMMENDED:**

1. V. Madiseti and A. Bahga, "Internet of things (A-Hand-on-Approach)", Universal Press.
2. Dr. SRN Reddy, RachitThukral and Manasi Mishra, "Introduction to Internet of Things: A practical Approach", ETI Labs
3. Pethuru Raj and Anupama C. Raman, "The Internet of Things: Enabling Technologies, Platforms, and Use Cases", CRC Press

## **REFERENCE BOOKS RECOMMENDED:**

1. Philip Levis, "TinyOS Programming"
2. F. Dacosta "Rethinking the Internet of things: A Scalable Approach to Connecting Everything", Apress publications.
3. D. Norris, "The Internet of Things: Do-It-Yourself Projects with Arduino, Raspberry Pi, and Beagle Bone Black", McGraw-Hill Education, New Delhi.
4. Raj Kamal, "Internet of Things: Architecture and Design", Tata McGraw Hill publication.
5. A. Pajankar and A. Kakkar, "Raspberry Pi by Example", Packt Publishing Ltd, Birmingham, UK.

**CSE- - Internet of Things and Cyber Security Including Block Chain Technology,**

**IV-Semester**

**IS403 Operating Systems**

**RATIONALE:** The purpose of this subject is to cover the underlying concepts Operating System. This syllabus provides a comprehensive introduction of Operating System, Process Management, Memory Management, File Management and I/O management.

**UNIT 1 Introduction to Operating Systems:** Function, Evolution, Desirable Characteristics and features of an O/S, Operating Systems Services: Types of Services, Different ways of providing these Services – Utility Programs, System Calls.

**UNIT 2 Process Management:** Concept of a process, Process State Diagram, Process based kernel, Dual mode of process execution, CPU scheduling algorithms, deterministic modeling, and System calls for Process Management, Concept of Threads: User level & Kernel level Threads. Process Management in UNIX & Windows

**Inter Process Communication:** Real and Virtual Concurrency, Mutual Exclusion, Synchronization, Critical Section Problem, Solution to Critical Section Problem : Semaphores and their Operations and their implementation. Deadlocks: Deadlock Problems, Characterization, Prevention, Avoidance, Recovery. IPC in UNIX & Windows

**UNIT 3 Memory Management:** Different Memory Management Techniques – Partitioning, Swapping, Segmentation, Paging, Paged Segmentation, Comparison of these techniques, Techniques for supporting the execution of large programs: Overlay, Dynamic Linking and Loading, Virtual Memory – Concept, Implementation by Demand Paging etc. Memory management in UNIX & Windows

**UNIT 4 File Systems Management:** File Concept, User's and System Programmer's view of File System, Disk Organization, Tape Organization, Different Modules of a File System, Disk Space Allocation Methods – Contiguous, Linked, Indexed. Directory Structures, File Protection, System Calls for File Management, Disk Scheduling Algorithms. File Systems in UNIX & Windows.

**UNIT 5 Input / Output Management :** Principles and Programming, Input/Output Problems, Different I/O operations: Program Controlled, Interrupt Driven, Concurrent I/O, Asynchronous Operations, Logical structure of I/O function, I/O Buffering, Kernel I/o Subsystem. Introduction to Network, Distributed and Multiprocessor Operating Systems. I/O management in UNIX & Windows

**TEXT BOOKS RECOMMENDED:**

1. Silberschatz, Galvin, Gagne, "Operating System Concepts", Wiley, 9 Edition.
2. William Stalling, "Operating Systems", Pearson Education,

**REFERENCE BOOKS:**

1. Andrew S. Tanenbaum, "Modern Operating Systems", 3/e, Prentice Hall
2. Maurice J. Bach, "The Design of Unix Operating System", Prentice Hall of India,
3. Bovet & Cesati, "Understanding the Linux Kernel", O'Reilly, 2/E.

**List of Experiments :**

1. Write a program to implement FCFS CPU scheduling algorithm.
2. Write a program to implement SJF CPU scheduling algorithm.
3. Write a program to implement Priority CPU Scheduling algorithm.
4. Write a program to implement Round Robin CPU scheduling algorithm.
5. Write a program to compare various CPU Scheduling Algorithms over different Scheduling Criteria.
6. Write a program to implement classical inter process communication problem (producer consumer).
7. Write a program to implement classical inter process communication problem (Reader Writers).
8. Write a program to implement classical inter process communication problem (Dining Philosophers).
9. Write a program to implement & Compare various page replacement algorithms.
10. Write a program to implement & Compare various Disk & Drum scheduling algorithms
11. Write a program to implement Banker's algorithms.
12. Write a program to implement Remote Procedure Call (RPC).
13. Write a Devices Drivers for any Device or peripheral.

**CSE- - Internet of Things and Cyber Security Including Block Chain Technology,**

**IV-Semester**

**IS404 Computer Organization& Architecture**

**Objectives:** Students to be familiarize the basic principles of computer architecture, Design and Multi Processing, Types of data transfer, Concept of semiconductor memories which is useful for research work in field Computer System.

**Unit I: Basic** Structure of Computer: Structure of Desktop Computers, CPU: General Register Organization-Memory Register, Instruction Register, Control Word, Stack Organization, Instruction Format, ALU, I/O System, bus, CPU and Memory Program Counter, Bus Structure, Register Transfer Language-Bus and Memory Transfer, addressing modes. Control Unit Organization: Basic Concept of Instruction, Instruction Types, Micro Instruction Formats, Fetch and Execution cycle, Hardwired control unit, Micro-programmed Control unit microprogram sequencer Control Memory, Sequencing and Execution of Micro Instruction.

**Unit II :**Computer Arithmetic: Addition and Subtraction, Two's Complement Representation, Signed Addition and Subtraction, Multiplication and division, Booth's Algorithm, Division Operation, Floating Point Arithmetic Operation. design of Arithmetic unit

**Unit III :**I/O Organization: I/O Interface –PCI Bus, SCSI Bus, USB, Data Transfer: Serial, Parallel, Synchronous, Asynchronous Modes of Data Transfer, Direct Memory Access(DMA), I/O Processor.

**Unit IV :** Memory Organization: Main memory-RAM, ROM, Secondary Memory –Magnetic Tape, Disk, Optical Storage, Cache Memory: Cache Structure and Design, Mapping Scheme, Replacement Algorithm, Improving Cache Performance, Virtual Memory, memory management hardware

**Unit V :**Multiprocessors: Characteristics of Multiprocessor, Structure of Multiprocessor-Inter-processor Arbitration, Inter-Processor Communication and Synchronization. Memory in Multiprocessor System, Concept of Pipelining, Vector Processing, Array Processing, RISC And CISC, Study of Multicore Processor –Intel, AMD.

**Reference Books:**

1. Morris Mano , “Computer System Organization” PHI
2. Alan Clements: “Computer Organization and Architecture”, Cengage Learning
3. Subrata Ghosal: “Computer Architecture and Organization”, Pearson
4. William Stallings , “Computer Architecture and Organization” PHI
5. M. Usha, T.S. Shrikant: “Computer System Architecture and Organization”, Wiley India
6. Chaudhuri, P. Pal: “Computer Organization and Design”, PHI
7. Sarangi: “Computer Organization and Architecture”, Mc-GrawHills

## List of Experiments :

1. Study of Multiplexer and Demultiplexer
2. Study of Half Adder and Subtractor
3. Study of Full Adder and Subtractor
4. WAP to add two 8 bit numbers and store the result at memory location 2000
5. WAP to multiply two 8 bit numbers stored at memory location 2000 and 2001 and stores the result at memory location 2000 and 2001.
6. WAP to add two 16-bit numbers. Store the result at memory address starting from 2000.
7. WAP which tests if any bit is '0' in a data byte specified at an address 2000. If it is so, 00 would be stored at address 2001 and if not so then FF should be stored at the same address.
8. Assume that 3 bytes of data are stored at consecutive memory addresses of the data memory starting at 2000. Write a program which loads register C with (2000), i.e. with data contained at memory address 2000, D with (2001), E with (2002) and A with (2001).
9. Sixteen bytes of data are specified at consecutive data-memory locations starting at 2000. Write a program which increments the value of all sixteen bytes by 01.
10. WAP to add 10 bytes stored at memory location starting from 3000. Store the result at memory location 300A

**CSE- - Internet of Things and Cyber Security Including Block Chain Technology,**

**IV-Semester**

**IS405 Computer Networks**

**Course Outcomes: After completing the course student should be able to:**

- Explain different terminologies of computer network and compare the architecture of networks.
- Evaluate the MAC layer performance.
- Construct and evaluate the existing protocols at the network and transport layer.
- Design and debug the IP networks.

**UNIT 1** Introduction to computer networks & their uses, Different topologies, ISO-OSI model: Layered Architecture, Peer-to-Peer processes and encapsulation, Function and Services of OSI layers; The Physical layer: Digital Signals, Transmission Impairments and Maximum data rate of a channel, Shennons theorem, Nyquist theorem. Transmission media: Guided and Unguided media, Circuit, Packet and Message switching, virtual Circuit. Introduction to ISDN & its components.

**UNIT 2** The data link layer: Design issues & function, Error detection & correction, Forward error correction Versus Retransmission, Hamming code & CRC codes, Framing: Fixed size and Variable size Frame, Bit stuffing and Byte stuffing. Data link layer protocols: Simplest, Stop and Wait, Sliding window protocols, PPP, SLIP, HDLC. The medium access sublayer: Static and Dynamic Channel Allocation, Protocols: ALOHA Protocol, CSMA (CSMA/CD, CSMA/CA), Collision Free Protocol- Bit Map.

**UNIT 3** IEEE 802 standards for LANs (IEEE 802.3, IEEE 802.4, IEEE 802.5), LAN Devices: HUB, Switches- Learning, Cut-Through and store and forward switches, Bridges: IEEE 802.x to IEEE 802.y, Spanning Tree, Remote Bridge. Internetworking Devices: Routers & gateways. The network layer: Design issues and functions, Internal organization (Virtual Circuit & Datagrams).

**UNIT 4** Routing algorithms: Shortest path routing, Flooding, LSR, Distance Vector Routing, Hierarchical Routing. Introduction to TCP/IP Protocol stack: Protocol Architecture, Classful IP addressing, ARP, RARP, IP Datagrams with options and its delivery, ICMP.

**UNIT 5** Subnet, Supernet, CIDR. Transport Layer: Congestion control, Load Shedding, Jitter control, addressing and multiplexing, Connection establishment and connection release, flow control. Application layer: Introduction to DNS and Email.

**References:**

2. Douglas E Comer, "Internetworking With Tcp/Ip Principles, Protocols, And Architecture - Volume I" 6<sup>th</sup> Edition, Pearson Education
3. Dimitri Bertsekas, Robert Gallager, "Data Networks", PHI Publication, Second Edition.
4. Kaveh Pahlavan, Prashant Krishnamurthy, "Networking Fundamentals", Wiley Publication.
5. Uyless Black, "Computer Networks", PHI Publication, Second Edition.
6. Ying-Dar Lin, Ren-Hung Hwang, Fred Baker, "Computer Networks: An Open Source Approach", McGraw Hill.

**List of Experiments:**

1. Study of Different Type of LAN & Network Equipment's.
2. Study and Verification of standard Network topologies i.e. Star, Bus, Ring etc.
3. LAN installations and Configurations.
4. Write a program to implement various types of error correcting techniques.
5. Write a program to Implement various types of framing methods.
6. Study of Tool Command Language (TCL).
7. Study and Installation of Standard Network Simulator: N.S-2, N.S3, OpNet, QualNet etc .
8. Study & Installation of ONE (Opportunistic Network Environment) Simulator for High Mobility Networks .
9. Configure 802.11 WLAN.
10. Implement & Simulate various types of routing algorithm.
11. Study & Simulation of MAC Protocols like Aloha, CSMA, CSMA/CD and CSMA/CA using Standard Network Simulators.
12. Study of Application layer protocols-DNS, HTTP, HTTPS, FTP and TelNet. protocols.

**CSE- - Internet of Things and Cyber Security Including Block Chain Technology,**

**IV-Semester**

**IS406 Java Lab**

**Course Objectives:**

1. Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc.
2. Understand fundamentals of object-oriented programming in Java and be familiar of the important concepts like class, inheritance and multithreading, AWT and JDBC.
3. Students will be able to use the Java SDK environment to create, debug and run simple Java programs.

**Unit 1.** Overview of Java, Installation, First Simple Program, Compilation process, Java Keywords, Identifiers, Literals, Comments, Data Types, Variables, Dynamic initialization, type conversion and casting, Operators, Control Statements.

**Unit 2.** Declaring Objects, Introducing Methods, Constructors, this Keyword, Garbage Collection, finalize Method, Overloading Methods, Overloading Constructors, Using Objects as Parameters, Inheritance, Creating a Multilevel Hierarchy, Packages and Interfaces, Exception Handling, Multithreading

**Unit 3.** The Applet Class: Applet Basics, The Applet Class, Applet Architecture, Applet Initialization and Termination, Simple Applet Display Methods, Simple Banner Applet, Using the Status Window, The HTML APPLET Tag, Passing Parameters to Applets, Improving the Banner Applet.

**Unit 4.** Introducing the AWT: Working with Windows, Graphics, and Text, AWT Classes, Window Fundamentals, Component, Container, Panel, Frame, Working with Frame Windows, Handling Events in a Frame Window, AWT Controls, Layout Managers, and Menus, Adding and Removing Controls, Grid Layout, Border Layout, introduction to swing and servlet.

**Unit 5.** Event Handling, Two Event Handling Mechanisms, The Delegation Event Model, Events, Event Sources, Event Listeners, Event Classes, The Mouse Event Class and others, JDBC: JDBC ODBC bridge, the connectivity model, the driver manager, navigating the result set object contents, the JDBC exceptional classes, connecting to remote database.

**Reference Books:**

1. E. Balagurusamy, "Programming with Java A Primer", McGraw Hill.
2. Sharanam Shah, "Core Java 8 for Beginners", Shroff Publisher.
3. Naughton & Schildt, "The Complete Reference Java 2", Tata McGraw Hill.
4. Horstmann & Cornell, "Core Java 2" (Vol I & II), Pearson.

**List of Experiments:**

1. Write a program that accepts two numbers from the user and print their sum.
2. Write a program to calculate addition of two numbers using prototyping of methods.
3. Program to demonstrate function overloading for calculation of average.
4. Program to demonstrate overloaded constructor for calculating box volume.
5. Program to show the detail of students using concept of inheritance.
6. Program to demonstrate package concept.
7. Program to demonstrate implementation of an interface which contains two methods declaration square and cube.

8. Program to demonstrate exception handling in case of division by zero error.
9. Program to demonstrate multithreading.
10. Program to demonstrate JDBC concept using create a GUI based application for student information.
11. Program to display “Hello World” in web browser using applet.
12. Program to add user controls to applets.
13. Write a program to create an application using concept of swing.
14. Program to demonstrate student registration functionality using servlets with session management.
